

SUSTAINABILITY IN THE BREAK ROOM

LESS PAPER TOWEL

Paper towels are super convenient! However, it's easy to overuse. To prevent this, only take what you need and be sure to use the entirety of the towel!

RINSE & RECYCLE

Did you know that plastics cannot be recycled if they are dirty? To ensure your item gets recycled, be sure to rinse it out before tossing it in the bin.

WATER BOTTLE

Bringing your own water bottle to work is an excellent way to reduce disposable bottles! If you have a disposable bottle, try re-using it as much as you can.

BYO TUPPERWARE

Bringing your own lunch from home is a great way to reduce single-use plastic and styrofoam from take-out. You don't have to eliminate take-out all together, just try to plan ahead and bring your own lunch when possible.

BYO UTENSILS

Just like tupperware, bringing your own utensils and straws help eliminate single-use plastics from going to the landfill! Single-use plastic utensils and straws are NOT recyclable.

TOSS PROPERLY

To prevent recycling contamination, see the "Rubbish or Recycle?" flyer to learn about what is and isn't recyclable.
